

Hello, my name is Morteza Razavi.

I graduated from Quchan [Quchan university of technology](#). with a Bachelor's degree.

I have programming expertise with Qt, C++, and QML.

I enjoy art and UI design.

I'm also informed on the following subjects:

- Git version control.
- GitHub CI/CD (just [this](#) little GitHub workflow for Qt Windows build).
- GNU/Linux (my main OS is Windows, but I like to use Linux distributions too).
- Arduino programming.
- ARM programming (currently learning).
- \LaTeX .
- JavaScript and JQuery, as used in my [website](#).
- And some knowledge of CSS and Bootstrap and PHP.

Some of the projects which I developed:

- [knight-pen](#), Simple screen annotation software.
- [qml-neumorphism](#), QtQuick Neumorphism (soft UI) style for Qt applications.
- [smr-wp-plugin](#), All in one WordPress plugin.
- [car-alarm](#), This project is centered on building hardware that can be installed in your automobile to help safeguard it from thieves and give you more control over it.
- [persian-subtitle-fixer](#) A little software that transforms the Windows-1256 character set to UTF-8.

See my other projects on [GitHub](#).
