Hi, my name is Seyyed Morteza Razavi.
I have a Bachelor's degree from Quchan university of technology.
I have experience with Qt, C++, and QML programming.
I love painting and UI designing.

I'm also familiar with the following topics:

- Git version control.
- GitHub CI/CD (just this little GitHub workflow for Qt Windows build).
- Linux (my main OS is Windows, but I like to use Linux distributions too).
- Arduino programming.
- ARM programming (currently learning).
- LaTeX.
- JavaScript and JQuery, as used in my website.
- And a little experience in CSS and Bootstrap.

Some of the projects which I developed:

- knight-pen, A simple screen annotation software.
- qml-neumorphism, QtQuick Neumorphism (soft UI) style for Qt applications.
- smr-wp-plugin, all in one WordPress plugin.
- car-alarm, this project is based on designing hardware that installs in your car and helps to protect the vehicle against thieves and have better control over it.
- persian-subtitle-fixer.

See my other projects on GitHub.
